Furniture Design for a Responsive Space

Centred on Furniture Using Digital Media

Jin Choi · Hongik University IDAS, Digital Media Design

Why I Care About Space — 1

While branding F&B, TECH, FASHION, PERSONAL

People increasingly wanted to live in their own way. That
interest naturally turned toward the space I inhabit
every day.

ONLY LOVE MAKES THE VASTNESS
BEARABLE. DEFINE AND SPREAD Y
OUR LOVE. what

fLuX

Why I Care About Space — 2

I wanted to make something real.

Object of Interest

SPACE

We live inside space every day, and furniture stands
between us.

Perspective

Furniture is the smallest unit of architecture.

Then, changing the furniture changes the relationship between people and space.

Hypothesis

If furniture responds to a person, the space begins to recognize them too.

I believe furniture can connect people and space.

A person is sitting on a white, illuminated cube in a dark room. The person is wearing dark pants and is barefoot. The cube is glowing from within, casting a soft light on the person and the floor. The background is dark and out of focus.

Material

Steel is cold. Only a human touch makes it warm.

Light is not a material — it is the trace a person leaves behind.

Why Digital Media

To turn a human act into data.

01 A sensor turns the act of sitting into data.

02 That data is calculated and accumulated as time.

03 The calculated time returns instantly as light and numbers.

Research Question

How can furniture let people interact with space?

Validation Method (Planned)

Survey · Automatic Dwell-Time Log · Observation Notes

To be conducted after the furniture is built

Expected Impact

Academic Contribution

A starting point for research on space–human relationships mediated by furniture

Practical Contribution

Suggests real-world applicability for responsive furniture design

Timeline

Roadmap

Object

Room

Space

A dark, moody photograph of a person in a dark coat standing in a doorway. The person is silhouetted against a bright, rectangular light source that appears to be a window or a doorway. The person's coat is long and dark, and they are standing with their back slightly turned. The overall atmosphere is mysterious and contemplative.

**What completes a space
is, in the end, the person who is inside it.**

Thank You
